Find a password of interest within the rockyou.txt file or another dictionary.

Create an MD5 representation for the given password

Create a SHA256 representation for that password too.

```
Untitled1 x Untitled2
1 password raw: heheimsleepy
2 password md5: 38c5f63d0036daa7fb136dce716533fc
3 password sha256: b059e35891494b0e78abd4d6943b8907f7e52395d1af856af07402d164ec5954
4 |
```

```
(champuser@kali)-[/usr/share/wordlists]
$ echo -n "heheimsleepy" | md5sum
38c5f63d0036daa7fb136dce716533fc -
```

```
(chamuser@kali)-[/usr/share/wordlists]  
$ echo -n "heheimsleepy" | sha256sum  
b059e35891494b0e78abd4d6943b8907f7e52395d1af856af07402d164ec5954 -
```
