

# Assignment 1.2 The Kali Virtual Machine

1. Log into your Kali box using the default password
  - a. <https://docs.google.com/document/d/1h97gchVRnHQyo4mL3GtkHYTuKJqeFtwbqCwcLnZ1Reo/edit?usp=sharing>
  - b. **Please change this password, this should be the first thing you do after logging in**
2. On your Kali machine, open up Chrome and log into Google using an account of your choice
  - a. You are welcome to use your Champlain account, BUT think about tradecraft here, typically you want to separate the “sketchy” activities you might be doing as a tester from your regular accounts
3. Still on your Kali machine, go to `remotedesktop.google.com/access`, click set up access, and download the extension
4. *Still* on the Kali machine, Enter a name for the device that is recognizable (Ex. kali01-ethhack-firstName.lastName) and set up a pin
5. **Log out of your Kali system**

6. Now, **on your host machine (NOT Kali)** log into the Google account you set up the remote desktop on visit `remotedesktop.google.com/access`, and connect to Kali

## Deliverable

Provide a screenshot similar to the one below that shows your Kali VM running within a Chrome Remote desktop system(1), and a Kali web browsing session to <http://10.0.5.21> (2)
